PRESENTATION FORMAT

The Conference audio visual will use Microsoft Office PowerPoint.

Screen size ratio is **16:9**. This is a setting in Microsoft PowerPoint, but to check when setting up your document, click on 'Design' tab, and then click 'Page Setup'. In 'Page Setup', under 'Slides sized for', select "On Screen Show 16:9"

Any video clips within your presentation are required in either AVI or WMV format playable in PowerPoint. Please check that the video has been tested before the presentation to ensure it loads in a timely manner during the presentation.

As presentations will be screening from a computer via a projector, presentations with a large file sizes or photographs should have the photos compressed to 96dpi for screen/web. This will decrease the file size without affecting the image quality. This feature is available within PowerPoint in the picture tool bar.

Be sure to save the multimedia files on the same memory storage device as your presentation. If the media file does not accompany the PowerPoint presentation file, the equipment will not allow the media file to play.

If you have used any special nonstandard fonts please be sure to bring these with you as well.

MAC presentations

If your presentation only runs on an Apple Mac, **please bring a HDMI adapter with you as well as your laptop.**

We highly recommend coming in early and testing your presentation in your allocated room on a break to ensure it is all in working order.

Images & Video clips

Presenters may use images in their presentations, where relevant. It is the presenters' responsibility to ensure they have the copyright to use the images in their presentations.

Any video files will need to be in the same folder as the PPT to work simultaneously.
